Prediction of e-learners' progress and timely assessment of the achievement of learning outcomes in Lifelong Learning

www.criton.eu

The CRITON project

The CRITON project aims to offer *accurate and timely prediction* of distance or elearner performance at the end of an academic session.

This project will enable the teachers and tutors of different academic levels (primary/secondary/tertiary education, adult education, VET) to quickly predict in advance whether an e-learner will succeed or fail by the end of the academic year.

The CRITON project will improve academic outcomes and lead to more personalized education by improving the methods of assessment and enhancing the distance/elearning process. This will be achieved through the development of the CRITON platform: a platform based on studies and research of the most dominant evaluation methods in distance education and elearning.

Who can benefit from the CRITON project?

The final beneficiaries of the CRITON project will be the students and teachers engaged in distance or e-learning. To reach this target group the project seeks to work closely with:

- Students and teachers of all academic levels involved in distance or e-learning
- Students and tutors in adult education institutions that offer distance or e-learning
- Students and tutors of institutions offering Vocational Education and Training (VET) through distance or e-learning.

Aims of the CRITON project

The CRITON project aims to:

- Support the monitoring of e-learner progress
- Provide the direction required to achieve pre-determined academic outcomes
- Provide means for interaction between e-learners and teachers/tutors
- Prevent exclusion resulting from poor academic achievement by utilizing social networks

Project outputs

We are going to...

- Define a set of predictive indicators derived from the assessment methods used in distance and elearning
- Develop the CRITON PLATFORM based on these indicators, thereby realizing the main outcome of this project.

CRITON platform

The CRITON PLATFORM will be web-based, and will include:

Teacher and tutor access to a predictive system that will forecast elearner progress in a timely fashion;

Α

social

networking tool for elearners that *facilitates communal learning* while simultaneously allowing students *to*

increase their potential by developing their abilities and sharing knowledge.
